The following is an examiner's statement of reasons for allowance:

3. Independent Claim 1 is allowable because none of the prior art of record disclose a protective relay for an inductive motor comprising a circuit for establishing a second thermal threshold value for a run condition of the motor, the second thermal threshold value being different from the first thermal threshold value for a start condition of the motor, wherein the circuit for establishing a second thermal threshold value includes a

selected time constant which is used to calculate a time-current curve combining the start and run time-current curves resulting in substantially continuous time-current curve in combination with the other claim limitations.

4. Claims 2 and 3 are dependent on allowable Claim 1 and therefore allowable.

Related Prior Art

5. Boothman et al. (4,544,982) disclose an Electrical Equipment Protection apparatus And Method. Boothman et al. disclose, "The motor thermal model 36 is a digital circuit which represents the thermal capacities and heat transfer properties of the motor components. The conductors for the three phases have a relatively low thermal capacity and they are a source of heat as they conduct current. It is preferable if the motor thermal model can represent the heating, which occurs during starting and running" (Col.4, Lines 36-42), but didn't disclose "combining the start and the run time-current curves resulting in a substantially continuous time-current curve".

Comments to reasons for allowance
